

# CISO PORTAL

## (THE HUB)

### Overview

SWORDFISH serves as the single gateway to the security organization, allowing easy access to corporate policies and execution of security procedures through a centralized and access controlled intranet gateway.

**CISO portal is used as the central repository of information throughout the organization.**

Users can easily access security policies and standards (respecting the corporate classification scheme and the "need to know"), and can easily initiate procedures to complete their tasks. In addition, available questionnaires and security polls are very effective and can produce impressive results in terms of security training and awareness.

### Rapid ISFM Deployment

**One of the key functions of the Swordfish Platform is the rapid and centralized deployment of the ISF to the entire organization based on each employee, Business Role and Information Security Role.**

The Swordfish Platform achieves this via the CISO Portal module, which is the application homepage for all end-users. The CISO portal, as its name suggests, is designed to be the single reference point and information repository of the Information Security Department serving as the interface of the Security Office with the entire organization.

### Awareness and Training

SWORDFISH facilitates on-line training and awareness through the CISO portal. **Training and Awareness content can be tailored to the organization needs.**

Material can be distributed to Targeted Audiences. Awareness and Training efficiency and effectiveness can subsequently be evaluated using questionnaires developed based on content.

## Collaborate

- Initiate and Participate in Processes (workflows) using role based access
- Initiate or create tasks via user-specific task lists and calendar-like views.
- Define, participate or attend based on Critical Milestones and Deadlines in processes or tasks assigned.
- Be notified for changes via the notification system, via CISO portal News and/or via e-mail.
- CISO Portal can have a customizable look-and-feel to fit the requirements of each organization.

## CISO Portal

- Access to Corporate Information Security Framework, including Policies, Standards,

Processes, Guidelines and ISF artifacts such as Forms & Questionnaires.

- Distribute Information Security Office News and announcements
- Communicate through a centralized channel for every security matter.
- Distribute Awareness and training material.

## Repository

- A central repository of information throughout the organization
- Easy access to security policies and standards
- Initiate procedures and complete tasks
- 3rd party Vendors can login in the CISO portal, contribute and collaborate with the organization's security management team.
- Simple Web Access
